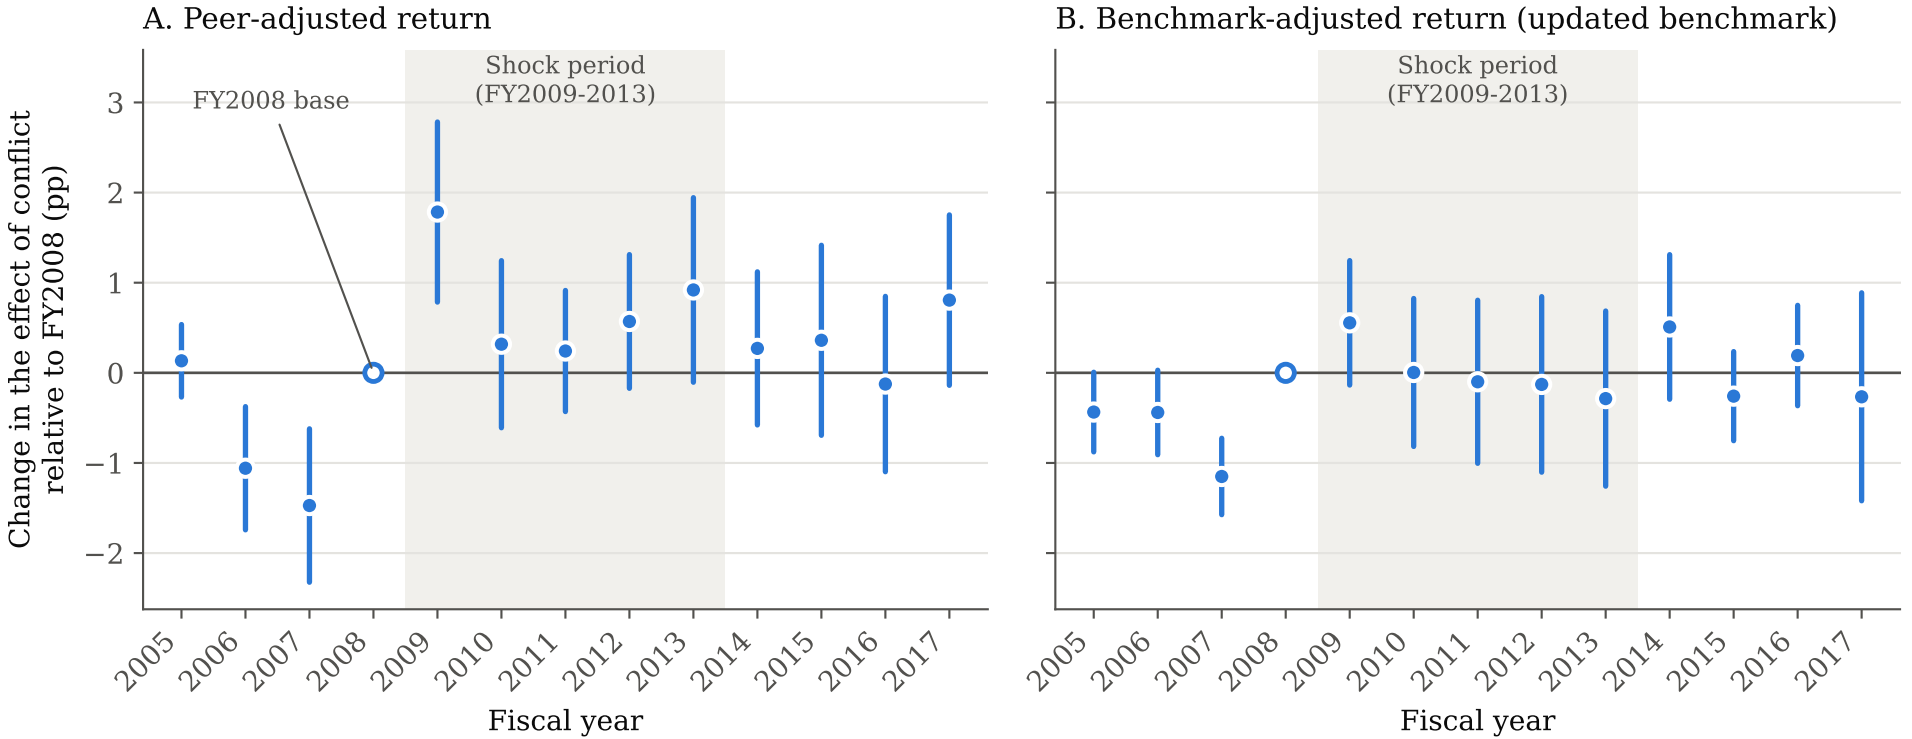
Event Study Around the Loglisci Shock (FY2008 Base)



Pre-shock leads = 0: p = 0.002
Shock-period coefs = 0: p = 0.000; mean 0.77 (t = 2.23)
Post mean minus shock mean: -0.44 (t = -1.67)
N = 1,565

Pre-shock leads = 0: p = 0.000
Shock-period coefs = 0: p = 0.209; mean 0.01 (t = 0.03)
Post mean minus shock mean: 0.04 (t = 0.17)
N = 1,394

Coefficients on Conflicted CIO x fiscal-year indicators relative to FY2008 (the last fiscal year before the Shock Period), from regressions that also include Conflicted CIO, the Table 5b controls, and plan and year fixed effects; bars are 95% confidence intervals, standard errors double clustered by plan and year. Endpoint bins for years before 2005 and after 2017 are estimated but not plotted.
