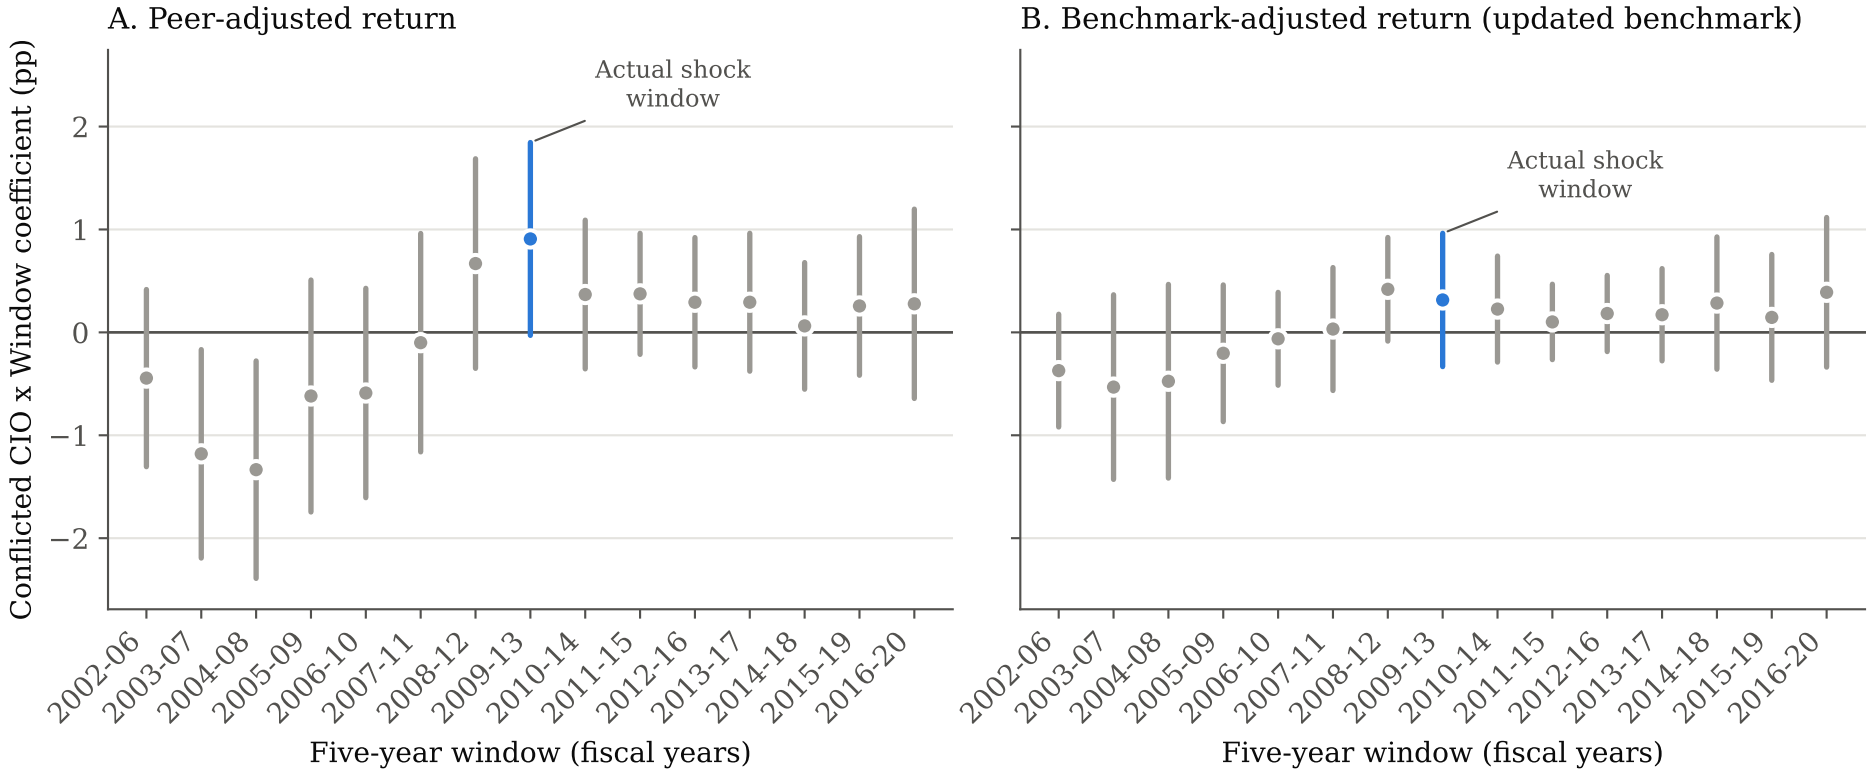
Placebo Windows: Conflicted CIO x Five-Year Window



Actual window (FY2009-13): 0.91 (t = 2.04); rank 1 of 15
Non-overlapping placebo windows: -1.33 to 0.28

Actual window (FY2009-13): 0.31 (t = 1.02); rank 3 of 15
Non-overlapping placebo windows: -0.53 to 0.39

Each point re-estimates Table VIII (plan and year fixed effects) with the Shock Period replaced by a five-year window of fiscal years starting in the year shown; bars are 95% confidence intervals, standard errors double clustered by plan and year. Windows overlapping FY2009-2013 partly contain the actual shock period.
